Summary

Backend software engineer working in Golang on fintech systems. I build production services and APIs with Golang, Spring Boot, Kafka, NATS and Twirp RPC, backed by PostgreSQL and MySQL, and ship them with Docker. Before backend work full time, I built full-stack products with React and Node.js/NestJS, and I have shipped payment gateway integrations with local banks and wallets. I like reliable, scalable systems and turning business requirements into practical technical solutions.

Work Experience

Backend Developer (Golang), Pitron Tech Solutions

June 2026 – Present

- Build and maintain backend services for several fintech solutions, primarily in Golang, with Spring Boot services where the stack calls for it.
- Connect services with Twirp RPC for synchronous calls and with Kafka and NATS for asynchronous, event-driven messaging.
- Design and query data in PostgreSQL and MySQL.
- Package and run services with Docker.

Backend Developer, AddisPay

July 2025 – June 2026

Backend developer on a payment gateway platform, building scalable Golang services in a microservices architecture.

- Implemented inter-service communication using gRPC and asynchronous messaging with RabbitMQ and Apache Pulsar.
- Integrated the platform with local banks and digital wallets: CBE, Awash Bank, Abyssinia Bank, Telebirr, M-Pesa, Kacha and Yaya.

- Developed higher-level business services on top of the gateway, including event payment and school payment solutions.
- Worked with PostgreSQL, MySQL and MongoDB, and collaborated with cross-functional teams to design APIs, implement business logic and keep production reliable and performant.

Frontend Developer (Internship), Ewenet Communication PLC

May 2024 – Oct 2024

- Developed the frontend of Reunite Us, a missing persons platform, in Nuxt.js with a focus on performance and usability.
- Implemented state management with Pinia and improved responsiveness with Tailwind CSS.
- Integrated NestJS backend services and worked with backend developers on secure, seamless API communication.

Freelance / Contract Work

2024 – 2025

- **BambooSIM (Upwork), SIM card e-commerce site:** Full-stack build with a React frontend and NestJS backend, as a multi-service Docker setup using Redis, Adminer, Prisma and PostgreSQL. Handled SEO to improve discoverability.
- **Discord Bot (Upwork):** TypeScript bot for intern onboarding: project intros, daily task distribution, submission tracking, feedback and end-of-internship analysis. Built a RAG knowledge system with Notion as the source, ingestion, chunking and vectorization with text-embedding-003, stored in ChromaDB. Tracked interns and project state in SQLite; deployed on DigitalOcean with PM2 for multiple instances.
- **Full-Stack React Flow Application (Upwork):** React Flow frontend with a Node.js/Express backend, focused on clean architecture and maintainable code.
- **Logistics & Shipment Tracking System (client):** Shipment status management and tracking with a Next.js frontend, NestJS backend and MongoDB.
- **Lifeline Health Initiatives (local client):** Responsive static site for a medical organization in HTML, CSS and JavaScript.

Education

Bachelor of Science in Software Engineering, Bahir Dar University, Ethiopia (June 2025). CGPA 3.84.

Skills

Area	Technologies
Languages	Go, Java, TypeScript, JavaScript
Backend	Golang, Spring Boot, Node.js, Express.js, NestJS
Messaging & RPC	Kafka, NATS, Twirp RPC, gRPC, RabbitMQ, Apache Pulsar
Databases	PostgreSQL, MySQL, MongoDB, SQLite, Redis, Prisma, Mongoose
Frontend	React.js, Next.js, Nuxt.js, Redux Toolkit, Redux Saga, Pinia, Tailwind CSS, HTML, CSS
Infrastructure & Tools	Docker, Git/GitHub, PM2, ChromaDB, DigitalOcean, Vercel, Netlify, Koyeb

Certifications & Awards

- Best Project Award, Bahir Dar University
- AI Career Essentials, ALX

Projects

- **Dot-Code** (2025, team project): Award-winning MERN stack collaboration platform with real-time code editing, syntax highlighting, authentication, team collaboration, AI-assisted code suggestions and AI-powered debugging.
- **Ceramics Store** (2024–2025, personal): Next.js and MongoDB application with inventory management, product management and seller reports.
- **Songify** (2024, personal): MERN stack app to search, bookmark and organize favorite songs.

- **Liqu** (2025, personal): TypeScript Discord bot that answers questions using RAG and the Gemini API.
- **Lifeline Health Initiative** (2024, paid): Static website in HTML, CSS and JavaScript.
