Summary

Software Engineer with a strong full-stack foundation and a current focus on **backend development using Golang**. I have experience building production systems ranging from web applications and APIs to microservices and payment gateway integrations. My background includes working with React-based frontends, Node.js/NestJS backends, and cloud deployments, with growing expertise in distributed systems, messaging queues, and database design. I am passionate about building reliable, scalable systems and translating business requirements into practical technical solutions.

Work Experience

Backend Developer – AddisPay ***July 2025 – Present***

I work as a backend developer on a payment gateway platform, where I design and build scalable backend services using **Golang** within a **microservices architecture**. My work involves

- ➔ Implementing inter-service communication using gRPC and asynchronous messaging with RabbitMQ and Apache Pulsar.
- ➔ Integrating the platform with local banks and digital wallets such as CBE, Awash Bank, Abyssinia Bank, Telebirr, M-Pesa, Kacha, and Yaya.
- ➔ Developing higher-level business services on top of the gateway, including event payment systems and school payment solutions.
- ➔ Working with **PostgreSQL**, **MySQL**, and **MongoDB**, and collaborating closely with cross-functional teams to design APIs, implement business logic, and ensure reliability and performance in production environments.

Frontend Developer (Internship) – Ewenet Communication PLC May 2024 – Oct 2024

- ➔ Developed the frontend of **Reunite Us** (missing persons platform) using **Nuxt.js** with a focus on performance and usability.
- ➔ Implemented state management using **Pinia** and improved responsiveness using **Tailwind CSS**
- ➔ Integrated backend services built with **NestJS** and worked closely with backend developers to ensure secure and seamless API communication

Freelance / Contract Work 2024-2025

BambooSIM (Upwork) - Sim cards e-commerce site

- ➔ Built full-stack application: **React** frontend, **NestJS** backend
- ➔ Multi-service architecture with **Docker**
- ➔ Used **Redis, Adminer, Prisma, PostgreSQL,** gained experience in multi-service and containerized deployments
- ➔ Handled SEO to improve discoverability and search performance

Discord Bot (Upwork)

- ➔ Developed a **TypeScript** bot for intern onboarding: intros to projects, daily task distribution, submission tracking, and feedback, end-of-internship analysis of strengths and weaknesses.
- ➔ **RAG-based knowledge system**: Notion as knowledge base, ingestion, chunking, and vectorization with **text-embedding-003**, storage in **ChromaDB**.
- ➔ **SQLite** for tracking internees and project state, deployed on **DigitalOcean** with **PM2** for multiple instances.

Full-Stack React Flow Application (Upwork)

- ➔ Built application with **React Flow** and **Node.js / Express** backend
- ➔ Focus on clean architecture and maintainable code

Lifeline Health Initiatives (Local Client)

- ➔ Delivered a **static site** for a medical organization using **HTML,CSS, and JavaScript** (responsive design)

Logistics & Shipment Tracking System (Client)

- ➔ Built a system for a client to manage and track shipment status
- ➔ **Next.js** frontend, **NestJS** backend, **MongoDB** database.

Education

- **Bachelor of Science in Software Engineering, CGPA - 3.84**

  Bahir Dar University, Ethiopia — June, 2025

Skills

Languages:

- Go, TypeScript, JavaScript

Frontend Development

- React.js, Next.js, Nuxt.js
- Redux Toolkit, Redux Saga, Pinia
- Tailwind CSS, HTML, CSS

Backend Development

- Node.js, Express.js, Nest.js
- Golang
- gRPC, RabbitMQ, Apache Pulsar

Databases

- PostgreSQL, MySQL, MongoDB, SQLite
- Prisma, Mongoose

Infrastructure & Tools:

- Git/Github, Docker, PM2, Redis, ChromaDB
- DigitalOcean, Vercel, Netlify, Koyeb.

Certifications

- **Bachelor of Science in Software Engineering - Bahir Dar University**
- **Best Project Award - Bahir Dar University**
- **AI Career Essentials – ALX**

Projects

- **Dot-Code** (***2025, Team project***) - Award-winning MERN stack collaboration platform supporting real-time code editing, syntax highlighting, authentication, team collaboration, AI-assisted code suggestions, and AI-powered debugging.

- **Ceramics Store** (***2024-2025, Personal project***) **–** Next.js and MongoDB application. Features inventory management, product management, and seller reports.

- **Songify** (***2024, Personal project***) A MERN stack application through which users are able to search, bookmark, and organize their favorite songs.

- **Lifeline Health Initiative** **(2024, Paid project)** Developed and published a static web site with HTML, CSS, and JavaScript.

- **Liqu** **(2025, Personal project)** a discord bot that uses RAG and answers questions when using Gemini's API, made with TypeScript.
