Summary

Software Engineer with a strong full-stack foundation and a current focus on backend development using Golang. I have experience building production systems ranging from web applications and APIs to microservices and payment gateway integrations. My background includes working with React-based frontends, Node.js/NestJS backends, and cloud deployments, with growing expertise in distributed systems, messaging queues, and database design. I am passionate about building reliable, scalable systems and translating business requirements into practical technical solutions..

Work Experience

Backend Developer – AddisPay July 2025 – Present

I work as a backend developer on a payment gateway platform, where I design and build scalable backend services using Golang within a microservices architecture. My work involves implementing inter-service communication using gRPC and asynchronous messaging with RabbitMQ and Apache Pulsar, as well as integrating the platform with local banks and digital wallets such as CBE, Awash Bank, Abyssinia Bank, Telebirr, M-Pesa, Kacha, and Yaya.

In addition to core gateway services, I develop higher-level business services on top of the platform, including event payment systems and school payment solutions. I work with relational and non-relational databases such as PostgreSQL, MySQL, and MongoDB, and collaborate closely with cross-functional teams to design APIs, implement business logic, and ensure reliability and performance in production environments.

Frontend Developer (Internship) – Ewenet Communication PLC May 2024 – Oct 2024

Developed the frontend of *Reunite Us* using Nuxt.js with a focus on performance and usability. Implemented state management using Pinia and improved responsiveness using Tailwind CSS. Integrated backend services built with NestJS and worked closely with backend developers to ensure secure and seamless API communication.

Freelance / Contract Work 2024-2025

Delivered multiple client projects covering frontend, backend, and automation systems. Built and deployed static and dynamic web applications using HTML, CSS, JavaScript, React, and Node.js.

Worked on a full-stack application using React (Redux Saga) and Express.js with a focus on clean architecture and maintainable code. Developed and deployed a Discord onboarding bot using TypeScript that automated intern onboarding, task distribution, submission tracking, and feedback generation. Implemented a RAG-based knowledge system using text embeddings and ChromaDB, managed user state using SQLite and Keyv, and deployed multiple bot instances using PM2 on DigitalOcean.

Education

- **Bachelor of Science in Software Engineering, CGPA - 3.84**

  Bahir Dar University, Ethiopia — June, 2025

Skills

Languages:

- Go, TypeScript, JavaScript

Frontend Development

- React.js, Next.js, Nuxt.js
- Redux Toolkit, Redux Saga, Pinia
- Tailwind CSS

Backend Development

- Node.js, Express.js, Nest.js
- MongoDB, Mongoose

Databases

- PostgreSQL, MySQL, MongoDB, SQLite

Infrastructure & Tools:

- Git/Github, Docker, PM2
- DigitalOcean, Vercel, Netlify, Koyeb.

Certifications

- **Bachelor of Science in Software Engineering - Bahir Dar University**
- **Best Project Award - Bahir Dar University**
- **AI Career Essentials – ALX**

Projects

- **Dot-Code** (***2025, Team project***) - Award-winning MERN stack collaboration platform supporting real-time code editing, syntax highlighting, authentication, team collaboration, AI-assisted code suggestions, and AI-powered debugging.

- **Ceramics Store** (***2024-2025, Personal project***) **–** Next.js and MongoDB application. Features inventory management, product management, and seller reports.

- **Songify** (***2024, Personal project***) A MERN stack application through which users are able to search, bookmark, and organize their favorite songs.

- **Lifeline Health Initiative** **(2024, Paid project)** Developed and published a static web site with HTML, CSS, and JavaScript.

- **Liqu** **(2025, Personal project)** a discord bot that uses RAG and answers questions when using Gemini's API, made with TypeScript.
